

INVISIBLE HINGES FOR WOOD DOORS

We have been developing new hinges for wood doors that perfectly fit.

These hinges can be used on left or right-handed doors, with a 180° opening. The reduced space between the door jamb and the leaf offers additional finger protection.

With EU certification, they meet most technical requirements of space planning projects, whether they are used on standard 40 mm wood doors or flush doors (please see below).

1. Invisible hinges on a wood flush door
2. Invisible hinges on a standard door

WOOD FLUSH DOORS

Wood flush doors soften the lines of the partition, especially when used with invisible hinges.

The partition and the door being flush, there is no longer any recess, either on the inside or outside of the office.

Thickness : 73 mm
Height : from 2040 to 2240 mm
Color : wide range of laminated or wood veneer
