LOW-CARBON GLAZING : clear vision, lower impact.

ABCD International has always placed innovation at the heart of its solutions.

Today, innovation also means a strong commitment to sustainability: offering more responsible materials without compromising on quality. With this in mind, we now offer **low-carbon glazing** (available upon request), a major step forward in office design.

KEY BENEFITS :

- **Reduced carbon footprint :** significantly lower CO_2 emissions during the manufacturing process.
- **More sustainable production :** increased use of recycled raw materials and optimized production methods.
- **Uncompromised performance :** the same acoustic insulation, light transmission, and comfort as standard glazing.

WHAT IS LOW-CARBON GLAZING ?

Low-carbon glazing is manufactured using a higher proportion of cullet (recycled glass) and low-carbon energy sources, significantly reducing CO_2 emissions.

While conventional glass generates approximately **1,000 kg of CO_2 per tonne produced**, low-carbon glazing reduces this figure to approximately **700 kg of CO_2 per tonne**, representing a **30% reduction**.

As a result, it helps significantly reduce the overall carbon footprint of glazing used in buildings.

WHY DOES IT MATTER ?

Low-carbon glazing makes it possible to create modern, comfortable, and aesthetically pleasing spaces while contributing to the reduction of a project's environmental impact.

HEADQUARTERS

- 4-8, rue des Carriers Italiens
  ZAC Centre Ville
  91350 Grigny - France
- tel. : +33 (0)1 69 02 44 00
- contact@abcd-international.fr

RHÔNE-ALPES BRANCH

- 173, avenue Charlie Chaplin
  Parc ACT'Y 2, Bâtiment E3
  69800 Saint-Priest
- tél. : +33 (0)4 81 65 92 80
- contactlyon@abcd-international.fr

ABCD REMAKE WORKSHOP

- 13 Rue Gutenberg
  ZAC de la Marinière
  91070 Bondoufle - France
- tel. : +33 (0)6 06 58 95 55
- contact@abcd-remake.fr

PACA BRANCH

- 213, rue Jean Deurrieu
  ZAC du Sagnon
  13690 Graveson - France
- tel. : +33 (0)4 86 19 45 05
